FET Environmental & Energy Policy

FarEastone Telecommunication (FET) is well aware of the risks and opportunities our business operations may bring on the environment and energy consumption. Therefore, through various innovative applications and intelligent core technologies, we conduct environmental due diligence on key business partners and Mergers and Acquisitions (M&A) targets, and work with stakeholders such as customers, shareholders, employees, and suppliers to jointly implement the following specific environmental and energy sustainability commitments.

■ Legal Compliance

FET follows the government's environmental protection and energy management regulations and audits the compliance of suppliers, contractors, and service providers as well as key business partners on a regular basis.

■ Employee Participation

FET strengthens the employees' awareness of environmental protection and energy conservation, so that they are able to help promote and share experience and technology with the industry, the government, and the academia.

■ Sustainable Purchasing

FET supports the purchase of energy-saving facilities and green products and establishes a sustainable supply chain through partnership and auditing the compliance of suppliers.

■ Energy and Resource Recycling

FET promotes resource recycling, enhances the utilization of renewable energy, and collaborates with suppliers and key business partners to implement the ecological footprint and greenhouse gas (GHG) emission management of the value chain.

■ Energy Conservation

FET sets the science-based GHG reduction targets and continuously improves the energy efficiency of business operations in order to become a benchmark enterprise with the best environmental sustainability performance.

■ Green Products and Services

FET provides quality network services and ICT technology, develops green products and services, and collaborates with key business partners to facilitate the development of smart green cities.
